

Experiment 16

Question

Perform Edge Detection using Canny Method.

Aim

To detect the edges of an image using the Canny edge detection algorithm in OpenCV.

Procedure

1. Import the OpenCV (cv2) library.
2. Read the input image using cv2.imread().
3. Check whether the image is loaded successfully.
4. Apply the Canny edge detector.
5. Display the original and edge-detected images.
6. Save the output image.

Code

```
import cv2
```

```
img = cv2.imread("dog.jpg",0)
```

```
edges = cv2.Canny(img,100,200)
```

```
cv2.imshow("Original",img)
```

```
cv2.imshow("Canny Edge",edges)
```

```
cv2.imwrite("canny_dog.jpg",edges)
```

Input

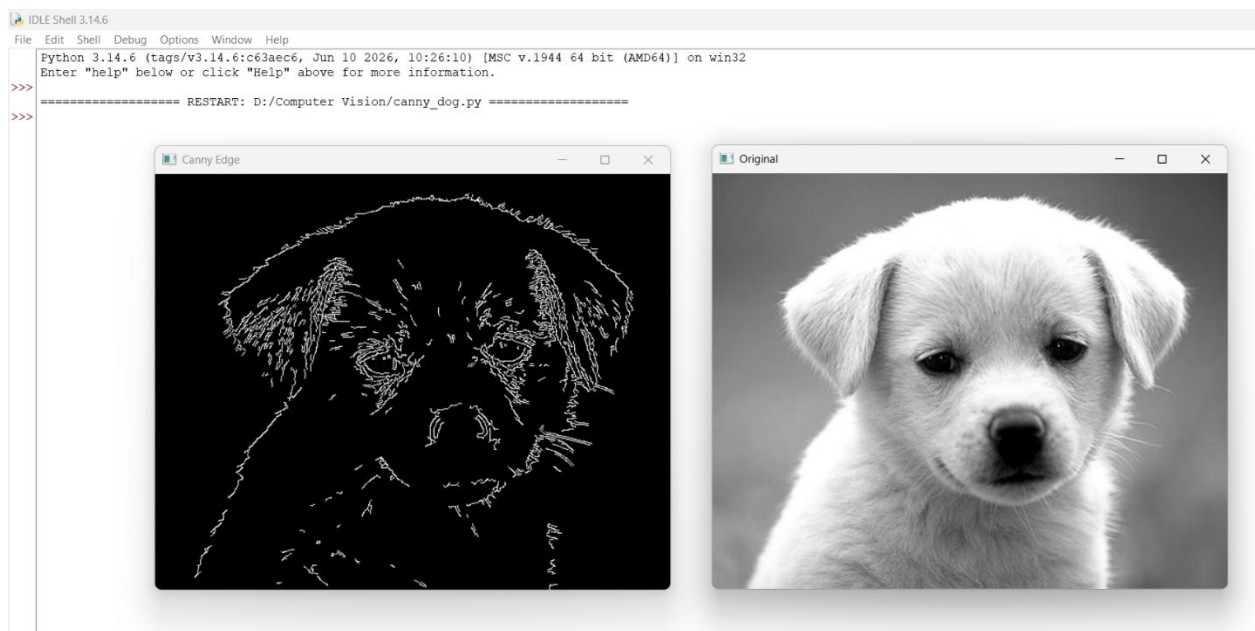

Input Image: dog.jpg

Output

- Original Image
- Canny Edge Image

Saved Image:

canny_dog.jpg

Result

The edges of the image were successfully detected using the Canny edge detection algorithm in OpenCV
